## INTRODUCCION

En este informe se presentan los principales aspectos estadísticos de la pesquería marítima peruana durante el año de 1967.

A diferencia de los informes anteriores se ha reducido el número de cuadros, principalmente en lo que se relaciona con el desembarque de la producción pesquera marítima, incluyéndose únicamente los cuadros resúmenes, los de captura total, por puertos, por especies, según utilización; y, los cuadros comparativos en valor y cantidad para los años 1966/67, por especies.

En lo que se refiere a la industrialización de los productos de la pesca marítima, consumo fresco, flota pesquera, plantas industriales, inversiones, personal ocupado y comercio exterior, se mantienen los cuadros que se consideran de mayor interés.

Como siempre las fuentes de información han sido las siguientes:

- a) Inspectores de Pesca del Instituto del Mar, destacados en los principales puertos pesqueros.
- b) Capitanías de Puerto.
- c) Empresas Pesqueras instaladas en nuestro país.
- d) Terminales Pesqueros de Lima y Callao.
- e) Superintendencia Nacional de Aduanas.
- f) Sociedad Nacional de Pesquería.
- g) Oficina Sectorial de Planificación Pesquera.

Una vez más agradecemos la colaboración que nos siguen ofreciendo.

## EXPLICACIONES GENERALES

Para el presente informe, se ha seguido la metodología establecida en anteriores informaciones estadísticas del Instituto, en el procesamiento y presentación de los datos recibidos de las diferentes fuentes; y, que en forma muy general contempla los siguientes criterios:

- 1º.—Los desembarques en algunas caletas con información incompleta o sin información, se han estimado a base de datos obtenidos en el Terminal Pesquero de Lima.
- 2º.—Las incongruencias de ciertos datos proporcionados por las distintas fuentes de información, también han sido sometidas a reajustes y estimaciones con la finalidad de acercarnos más a cifras reales.

- 3º.—En lo referente a los precios, se han considerado los precios de playa vigentes en cada zona o región y sus variaciones mensuales, con el fin de estimar la valorización de los desembarques.
- 4º.—En las informaciones relativas a la producción industrial se ha tenido en cuenta la relación materia prima-producto, y en los casos en que ha faltado alguno de ellos ha sido necesaria la estimación basada en los factores de rendimiento, según calidades y tipos de productos.
- 5º.—Es necesario aclarar, que aún no se ha podido cubrir la totalidad real de las informaciones relativas a los desembarques de pescado y mariscos, utilizados en el consumo fresco y en la industrialización del pescado salado, ahumado, seco, etc., que en forma particular realizan los pescadores en lugares fuera de control.
- 6º.—La información referente a caza de cetáceos, se presenta en el Cuadro N° 1.18 y no se incluye en los resúmenes generales.

NOTA: (\*) No incluye Cetáceos.

(°) Corresponde a las plantas y lugares que han proporcionado información.

(+) Incluye estimado en base a materia prima y rendimiento por especies.

(.) Incluye estimado en base al comportamiento mensual y a rendimientos que han variado con respecto a 1966, debido a mejores informaciones sobre especies y tipos de producto.

(°) Incluye: En Chimbote, 3,125.0 T.M. de harina de residuos.

En Huacho-Carquín, 465.0 T.M. de harina de residuos.

En Callao, 1,652.0 T.M. de harina de residuos.

DATOS: Partes Estadísticas Mensuales de Inspectores, Capitanías, Empresas, (a) Sociedad Nacional de Pesquería y (b) Oficina Sectorial de Planificación Pesquera.
